

Public Mapping for Local Government

Integrate, Enrich, Communicate.

Key Features

IntraMaps Public

- Rich functionality based on IntraMaps Enterprise
- Easy to configure and manage
- Cross browser compatible
- Hosted options available

IntraMaps MapControl

- Customisable web mapping components
- Configurable via the IntraMaps ConfigManager
- Cost effective
- Easily integrated with multiple business processes
- Integrate with your website's "look and feel"

The efficient distribution of information to ratepayers and the general public is an essential service provided by Local Government. This can be a time consuming task for Customer Service Officers and increasingly the general public are expecting to find this information available 24/7 via a Council's website.

This presents a unique set of challenges as both spatial and non-spatial information must be provided in a format that is easy to access, navigate and understand. In addition, this information needs to be easily managed by integrating with the Council's central data management architecture.

Intuitive

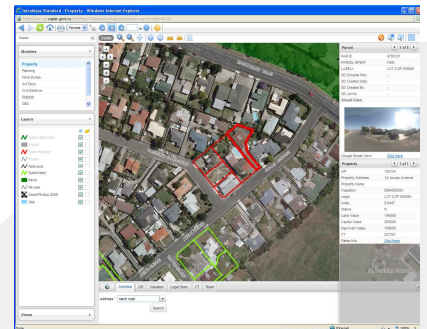

IntraMaps Public is a web based GIS application that has been designed to allow the general public easy access to your published enterprise GIS data via a simplified user interface with intuitive navigation tools.

By leveraging the latest web based technology and the same configuration tools as IntraMaps Enterprise, IntraMaps Public offers end users a rich and intuitive means of accessing corporate data from their web browser.

Fast, Simple, Secure

IntraMaps Public provides GIS Administrators and IT Managers with a comprehensive set of tools that allows them to quickly and easily manage and publish their public facing data.

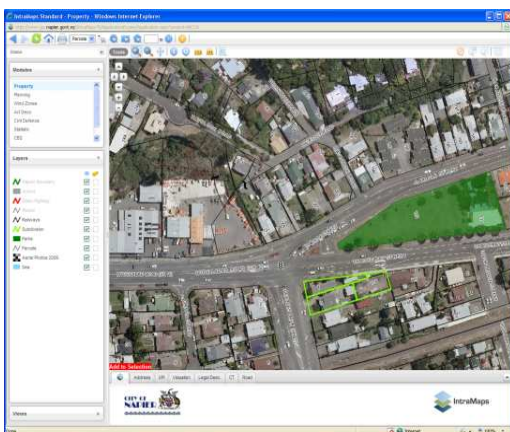

The data management architecture offers a powerful, robust and easy to manage public GIS application which ensures that full control is retained over all data accessed by the public providing comprehensive data security.

Flexible

IntraMaps Public supports most common web browsers and requires no additional plug-ins thereby ensuring access by the widest possible user community.

The IntraMaps Public architecture offers your organisation flexibility with implementation. The application can be installed on Council's own internal servers or can be hosted remotely with further options for a fully managed service by DMS.

IntraMaps Public

Integrate, Enrich, Communicate.

In response to the demand for specific property related information, Digital Mapping Solutions has developed IntraMaps MapControl which enables spatial searches to be placed strategically within a Council's website.

The user is no longer required to navigate to a separate web mapping page as the information is integrated seamlessly with the "look and feel" of the Council's existing web page.

One Step Navigation

For example – "When is my Bin Day" can be found within the Waste Services Information page or "What is my Zoning" would be with the planning information. Information is not linked to a separate, and often complex, web mapping application.

This is a cost effective solution that can utilise a Council's property and spatial data, regardless of the existing mapping system that is in place.

Support Services

To complement our product offerings, Digital Mapping solutions have a team of experienced professionals who are committed to providing excellence in customer service to ensure our clients maximise the benefits of their investment.

Need more information?

To find out more about Digital Mapping Solution's products and services or to arrange a demonstration please visit our website www.mapsolutions.com.au or email info@mapsolutions.com.au.

Ease of Data Management

IntraMaps MapControl is managed by the IntraMaps ConfigManager which allows administrators to efficiently manage all spatial and non-spatial data displayed.
